PATHOLOGY REPORT

Clinical Information.	Rt kidney mass involving mid and lower pole, ?? Angiomyolipoma.
Nature of specimen.	

GROSS:

Received was an opened right kidney specimen that measured 7.5 x 6.5 x 5 cm. A cross section revealed a mass composed almost entirely of fatty tissue that measured 7 x 6 cm. Gross examination showed no additional discrete mass or ureter.

MICROSCOPIC:

Specimen

- Specimen: Right kidney
- Procedure: Partial nephrectomy

Tumor

- Tumor Site: Right kidney
- Tumor Size: Greatest dimension 7 cm (additional dimension 6 cm)
- Tumor Focality: Unifocal
- Histologic Type: Angiomyolipoma
- Macroscopic Extent: Confined to resected tissue, composed almost entirely of fatty tissue

Margins

- Margin Status: Negative.

Additional Pathologic Findings

- Ureter: Not identified in specimen

Pathologic Stage Classification (pTNM)

- Not applicable (benign neoplasm)

DIAGNOSIS:

Right kidney, partial nephrectomy:

- Angiomyolipoma
