PATHOLOGY REPORT

Clinical Information.	Esophageal varices with severe erosive gastritis.
Nature of specimen.	Endoscopic biopsy

GROSS:

Biopsy from gastric antrum and corpus; soft tissue fragments collectively measured 0.6 cm.

MICROSCOPIC:

Gastric mucosa showing superficial erosions with moderate infiltration by lymphocytes and plasma cells. There is evidence of inflammatory activity manifested by some neutrophils infiltrating glands. H. pylori characteristic forms are seen. Focal intestinal metaplasia is noted, however there is no evidence of atypia or malignancy.

DIAGNOSIS:

Stomach, Endoscopic biopsy:

- H. pylori associated chronic erosive gastritis with associated moderate inflammatory activity and focal intestinal metaplasia.
- Negative for dysplasia or malignancy.
