Received date:		Reported date:	2026-05-30
Referred By:	د/ عقيل الشامي		

PATHOLOGY REPORT

Clinical Information.	Duodenitis with nodular pattern.
Nature of specimen.	Endoscopic biopsies.

GROSS:

Soft tissue fragments collectively measured 1 cm, totally embedded.

MICROSCOPIC:

Intact duodenal mucosa with moderate infiltration by lymphocytes, plasma cells and few neutrophils together with hyperplastic lymphoid follicles. No evidence of villous atrophy. No evidence of specific granulomas. No evidence of atypia or malignancy.

DIAGNOSIS:

Duodenum, endoscopic biopsy:

- Moderate chronic follicular duodenitis with associated minimal activity.
- Negative for malignancy.
