PATHOLOGY REPORT

Clinical Information.	Lt. testicular pain ? status post trauma, suspected testicular tumor.
Nature of specimen.	Biopsy

GROSS:

Soft tissue fragment measured 1.7x1.5x0.8 , totally embedded.

MICROSCOPIC:

Seminiferous tubules show average number of spermatogenic cells with average thickness of their basement membranes and active spermatogenesis ending at the formation mature sperms in all of the tubules. Interstitial cells are intact. There are scattered congested blood vessels denoting early torsion. However, no evidence of inflammation or tumors.

DIAGNOSIS:

Lt. Testis, biopsy:

- Active spermatogenesis .
- Mild congestion, suggestive of early torsion.
- Negative for inflammation.
- Negative for tumors.
