## PATHOLOGY REPORT

|                       |   |
|-----------------------|---|
| Clinical Information. | A primigravida pregnancy (G1P0+0) at 22 weeks of gestation complicated by sudden intrauterine fetal death, with the placenta submitted for histopathological examination. |
| Nature of specimen.   | Placenta  |

### GROSS:

Two soft tissue pieces collectively measured 3x2.2x1 cm, having spongy cut section, totally embedded.

### MICROSCOPIC:

Placenta shows unremarkable histologic features, no evidence of infarcts, calcification, villitis or amnionitis. No evidence of viral inclusions or other inflammations. No evidence of atypia or malignancy.

### DIAGNOSIS:

Placenta (22 weeks gestation, intrauterine fetal demise):

- Unremarkable histologic features.
- Negative for tumors.
