PATHOLOGY REPORT

Clinical Information.	Fluid specimen obtained via a second aspiration of a suspected breast galactocele.
Nature of specimen.	FNAC

GROSS:

One smear was prepared and pap stained from submitted 5 ml bloody fluid.

MICROSCOPIC:

Smear is hypocellular and shows scattered foamy macrophages in a background of granular proteinaceous secretory material. No significant epithelial component, cytological atypia, necrosis, or malignant cells is identified.

DIAGNOSIS:

Breast cyst, FNAC:

- Galactocele – Benign cystic lesion with lactational changes.
- Negative for malignancy.
