

Pt. Name:	سيده علي شايح السريحي		Lab Number:	3740-2026	
Pt. Age:	75 years.	Gender:	Female	Received date:	2026-06-06
Referred By:	د/ يونس الشعبي		Reported date:	2026-06-09	

PATHOLOGY REPORT

Clinical Information.	Hyperemic, friable and ulcerated mucosa, 30 cm from anal verge.
Nature of specimen.	Colonoscopic biopsy.

GROSS:

Fragments of collective size 7x5 mm.

MICROSCOPIC:

Colonic mucosa with mildly reduced mucigenic cells and related moderate infiltration by neutrophils and lymphocytes. Neutrophils appear to infiltrate glands in few foci but no crypt abscess formation. No evidence of dysplasia. No evidence of malignancy. Pictured is consistent with early ulcerative colitis.

DIAGNOSIS:

Colon, endoscopic biopsy:

- Consistent with early ulcerative colitis.
- Negative for malignancy.
