PATHOLOGY REPORT

Clinical Information.	Acute appendicitis.
Nature of specimen.	Appendectomy.

GROSS:

Appendectomy specimen measured 4.5x1 cm long with attached mesenteric fat measuring 5x1.5 cm, showing mucosal ulceration, showing cyst 2.5 cm, with wall thickness up to 0.3 cm.

MICROSCOPIC:

Appendicular lumen is full of neutrophils that extend into wall in between the mucosal associated lymphoid tissue together with lymphocytes and plasma cells. This inflammatory infiltrate extend to peri-appendicular soft tissue with an abscess formation. No evidence of specific granulomas. No evidence of appendicular tumors.

DIAGNOSIS:

Appendectomy:

- Acute (suppurative) on top of chronic appendicitis with associated periappendicitis and abscess formation.
- Negative for malignancy.
