PATHOLOGY REPORT

Clinical Information.	Pangastritis (bile induced gastropathy).
Nature of specimen.	Endoscopic biopsies.

GROSS:

Soft tissue fragments collectively measured 0.6 cm, totally embedded.

MICROSCOPIC:

Gastric mucosa with mild glandular atrophy and moderate infiltration by lymphocytes and plasma cells. Neutrophils are seen infiltrating glands thus indicating activity. H. pylori characteristic forms are not seen colonizing glands. GFocus of intestinal metaplasia are noted, however no atypia or malignancy are identified.

DIAGNOSIS:

Stomach, endoscopic biopsy:

- Moderate chronic atrophic gastritis with moderate inflammatory activity and focal intestinal metaplasia.
- Negative for atypia or malignancy.
