PATHOLOGY REPORT

Clinical Information.	Lt check ulcerative lesion.
Nature of specimen.	Wide local excision.

GROSS:

Three specimens were received:

- 1- Partially skin covered fibro fatty tissue measuring 6.5x6x2 cm, showing an ulcerative mass measured 5.3x5x1 cm. Margins of excision are 0.8 cm, 0.5 cm, 0.7, 0.8 cm and 1 cm from the superior, inferior, medial, lateral and deep margins respectively.
- 2- Soft tissue fragments collectively measured 2x2x1 cm, totally embedded.
- 3- One soft tissue fragment measured 0.5x0.4x0.3 cm, totally embedded.

PHOTOGRAPH

MICROSCOPIC:

- Procedure: Wide local excision.
- Tumor Type: Basal cell carcinoma, mixed infiltrative and nodular type.
- Tumor Site: Lt check.
- Tumor Size : 5.3x5x1 cm.
- Lymph-vascular invasion: Not identified (Negative).
- Perineural invasion: Present and extensive.
- Depth of invasion: 1 cm.
- Extent of infiltration: tumor is invading skeletal muscle superficially.
- Margins:
- Deep margin: 1 cm, Free of tumor.,
- Superior margin: 0.8cm, close.
- Inferior margin: 0.01 cm, free
- Medial margin: 0.7 cm, free.
- Lateral margin: 0.8 cm, free
- Pathologic Stage: pT3N0Mx.
- Specimen 2: positive for tumor extension.
- Specimen 3: Bony tissue is free of tumor extension.

DIAGNOSIS:

Wide local excision of Lt. Cheek mass:

- Basal cell carcinoma, mixed infiltrating and nodular type.
- Extensive perineural invasion.
- Margin: inferior close 0.01 cm, separately sent specimen 2, positive for tumor extension.
- Stage pT2N0Mx.
