<b>Received date:</b>		<b>Reported date:</b>	2026-06-10
<b>Referred By:</b>	د/ محمد حسين الشرقي		

## PATHOLOGY REPORT

<b>Clinical Information.</b>	Mandibular parasymphysis fracture associated with an indurated swelling and pus discharge in the submandibular area.
<b>Nature of specimen.</b>	Incisional biopsy.

### GROSS:

Soft tissue fragments collectively measured 1x1x0.7 cm, totally embedded.

### MICROSCOPIC:

Soft tissue showing dense infiltration by neutrophils, lymphocytes, macrophages, plasma cells and many cell debris, interstitial hemorrhage with related vascular endothelial proliferation. No evidence of specific granulomas. No evidence of malignancy.

### DIAGNOSIS:

#### Submandibular lesion, incision biopsy:

- Chronic suppurative inflammation (abscess).
- Negative for malignancy.
