PATHOLOGY REPORT

Clinical Information.	History of lower limb weakness for 6 months, presented with large midline mass, occupying sacral canal and neural exit.
Nature of specimen.	Excision biopsy.

GROSS:

Hemorrhagic fragments of collective size 4.5x3.8x1 cm.

MICROSCOPIC:

Materials received is entirely formed of blood clots entrapping scattered islands of inflammatory cells composed of neutrophils, lymphocytes, plasma cells and histiocytes. Other areas revealed fibrotic tissue. No evidence of specific granulomas. No evidence of malignancy in submitted material.

DIAGNOSIS:

Midline mass related to sacral canal, excision biopsy:

- Blood clots and chronic suppurative inflammation.
- Negative for malignancy.
