PATHOLOGY REPORT

Clinical Information.	Gastric mucosal hyperemia and congestion with submucosal hemorrhagic spots.
Nature of specimen.	Endoscopic biopsies.

GROSS:

Soft tissue fragments collectively measured 0.6 cm, totally embedded.

MICROSCOPIC:

Gastric mucosa showing mild glandular atrophy and mild infiltration by lymphocytes and plasma cells. Lymphocytes aggregate in some foci to form lymphoid follicles with active germinal centers. Neutrophils are seen infiltrating glands thus indicating activity. H. pylori characteristic forms are seen colonizing glands. No evidence of intestinal metaplasia, atypia or malignancy.

DIAGNOSIS:

Stomach, endoscopic biopsy:

- H. pylori-associated chronic atrophic follicular gastritis with mild inflammatory activity.
- Negative for atypia and malignancy.
