PATHOLOGY REPORT

Clinical Information.	Back cyst, ? sebaceous cyst.
Nature of specimen.	Excision biopsy

GROSS:

Partially covered soft tissue piece measured 1.5x1x1 cm, totally embedded.

MICROSCOPIC:

Sections show a well-circumscribed dermal cyst lined by stratified squamous epithelium with a distinct granular layer. The cystic cavity is filled with lamellated keratin. The surrounding stroma and overlying epithelium are unremarkable, with no evidence of atypia, inflammation, or malignancy.

DIAGNOSIS:

Back cyst, Excision Biopsy:

- Epidermal inclusion cyst (Epidermoid cyst).
- Negative for malignancy.
