PATHOLOGY REPORT

Clinical Information.	Uterine fibroids.
Nature of specimen.	Panhysterectomy.

GROSS:

Panhysterectomy: The Uterus measured 8x5.5x4.5 cm with an endometrium measuring 0.5 cm in thickness and a 1.7 cm thick uterine Wall. Sectioning revealed multiple Fibroid Masses, the largest of which measured 2x2 cm. The Cervix measured 3.5 cm in length. The Right Ovary measured 2x1x0.8 cm with an attached Right Fallopian Tube measuring 5x0.5 cm. The Left Ovary measured 1.5x1x0.7 cm with an attached Left Fallopian Tube measured 5x0.5 cm.

MICROSCOPIC:

Myometrial tumors are benign leiomyomas formed of whorly bundles of mature smooth muscles separated by a fibrous stroma. Endometrium is hyperplastic and non-secretory. It is formed of mildly branching glands separated by cellular stroma and lined by 1-2 layers of cells. No evidence of complex glandular pattern. Ovaries are atrophic. Fallopian tubes and cervix are unremarkable. No evidence of specific granulomas. No evidence of atypia or malignancy.

DIAGNOSIS:

Panhysterectomy:

- Leiomyomas.
- Mid simple endometrial hyperplasia.
- Atrophic ovaries.
- Negative for atypia.
