PATHOLOGY REPORT

Clinical Information.	Uterine cervical mass.
Nature of specimen.	Radical hysterectomy

GROSS:

Radical hysterectomy received into two containers:

1- Panhysterectomy: The Uterus measured 8.5 x 4.5 x 3 cm with an endometrium measuring 0.3 cm in thickness and a 1.5 cm thick uterine Wall. Sectioning revealed barrel shaped cervix measured 3.8 cm in length, almost entirely replaced by a solid, firm, gray-colored Mass measuring 4.3 x 4.5 x 3.5 cm. The Right and Left Ovaries measured 1.7 x 1 x 0.7 cm, each. Right and Left Fallopian Tubes measures 3.5 x 0.5 cm, each.

Received separately was one soft tissue piece measuring 4 x 3 x 1 cm, which showed a bloody colored and spongy cut surface.

2- External iliac lymph nodes: fibrofatty tissue measured 2x1.5x1 cm, entangling four lymph nodes, largest measured 1 cm.

MICROSCOPIC:

SPECIMEN

- Procedure: Radical abdominal hysterectomy
- Specimen Integrity: Submitted in two parts (uterus with adnexa, separate soft tissue piece, and external iliac lymph nodes).

TUMOR

- Tumor Site: Cervix (with extension to the vagina).
- Histologic Type: Carcinosarcoma (Malignant Mixed Müllerian Tumor / MMT).
- Tumor Size: 4.3 x 4.5 x 3.5 cm (greatest dimension: 4.5 cm).
- Macroscopic Appearance: Solid, firm, gray-colored mass almost entirely replacing the cervix (Barrel shaped).

Tumor Extension:

- Uterine Corpus / Corpus Extension: Not identified
- Vaginal Extension: Present (extends to the vagina).

Perineural Invasion: Not identified.

Lymphovascular Invasion (LVI): Not identified.

MARGINS

- Parametrial Margin: Negative for carcinosarcoma.
- Distance of tumor from margin: Less than 0.1 mm (close margin).
- Vaginal Margin: Negative for carcinosarcoma.

- Distance of tumor from margin: 0.5 cm.

ADJACENT ORGANS / TISSUES

- Endometrium: Uninvolved (0.3 cm thickness).
- Myometrium: Uninvolved (1.5 cm thickness).
- Right Ovary and Fallopian Tube: Negative for tumor; unremarkable.
- Left Ovary and Fallopian Tube: Negative for tumor; unremarkable.
- Separate Soft Tissue Piece: positive for the same tumor.

LYMPH NODES

- Regional Lymph Nodes: external iliac lymph nodes examined.
- Total number of lymph nodes recovered: 4.
- Number of positive lymph nodes: 0.

PATHOLOGIC STAGING (AJCC 9th Edition / FIGO 2018)

- Primary Tumor (pT): pT2a1
- Regional Lymph Nodes (pN): pN0 (No regional lymph node metastasis).

FIGO Stage: Stage IIA1.

DIAGNOSIS:

Uterine cervix mass, Radical hysterectomy:

- **Carcinosarcoma (Malignant Mixed Müllerian Tumor) of the cervix, measuring 4.5 cm in greatest dimension, with extension to the upper vagina.**
- **Parametrial and vaginal resection margins negative for malignancy (parametrial margin close <0.1 mm; vaginal margin 0.5 cm).**
- **No lymphovascular or perineural invasion identified.**
- **Four (4) regional pelvic lymph nodes negative for metastasis (0/4).**
- **Endometrium, myometrium, and bilateral adnexa are negative for tumor infiltration.**
