PATHOLOGY REPORT

Clinical Information.	Panhysterectomy.
Nature of specimen.	Panhysterectomy.

GROSS:

Panhysterectomy specimen; uterus measures 9 x 6.5 x 4 cm with an endometrium measuring 0.5 cm in thickness and a 2 cm thick uterine wall. Sectioning revealed a single solid, rubbery, grey mass measuring 2 x 1.7 x 1.5 cm. The Cervix measured 2.5 cm in length. The Right Ovary measured 2.3 x 1.5 x 1 cm, with an attached Right Fallopian Tube measuring 3.5 x 0.5 cm. The Left Ovary measured 2.3 x 1.5 x 1 cm, with an attached Left Fallopian Tube measuring 5 x 0.5 cm.

MICROSCOPIC:

Myometrial tumor is a benign leiomyoma formed of whorly bundles of mature smooth muscles separated by a fibrous stroma. Endometrium is hyperplastic and non-secretory. It is formed of moderately branching glands separated by cellular stroma and lined by 1-3 layers of cells. No evidence of complex glandular pattern. Some of hyperplastic endometrium are seen embedded within superficial myometrium. Ovaries, fallopian tubes and cervix are unremarkable. No evidence of specific granulomas. No evidence of atypia or malignancy.

DIAGNOSIS:

Panhysterectomy:

- Leiomyomas.
- Moderate simple endometrial hyperplasia.
- Superficial adenomyosis.
- Unremarkable cervix, ovaries and fallopian tubes.
- Negative for atypia and malignancy.
