PATHOLOGY REPORT

Clinical Information.	Two small gastric antral polyps.
Nature of specimen.	Endoscopic biopsy

GROSS:

Soft tissue fragments collectively measured 0.7 cm, totally embedded.

MICROSCOPIC:

Sections show gastric hyperplastic polyps composed of elongated, tortuous, and focally cystically dilated foveolar glands lined by reactive mucinous epithelium. The lamina propria is expanded by chronic inflammatory cells amounting at areas to form lymphoid follicles. Helicobacter pylori organisms are identified within the surface mucus layer. Areas of inetsinal metaplasia are seen. No evidence of atypia or malignancy.

DIAGNOSIS:

Stomach, endoscopic biopsy:

- Inflamed hyperplastic polyps, H. pylori associated.
- Negative for dysplasia or malignancy.
