

Pt. Name:	نورا محمد حسين الضياني	Lab Number:	0296-2026
Pt. Age:	32 years.	Gender:	Female
Received date:		Reported date:	2026-01-20
Referred By:	د/ سميرة التويتي		

PATHOLOGY REPORT

Clinical Information.	Missed abortion
Nature of specimen.	Uterine contents

GROSS:

Bloody soft tissue fragments collectively measured 10.5x8.5x1.3 cm, totally embedded.

PHOTOGRAPH

MICROSCOPIC:

Submitted material is dominantly formed of clotted blood, decidualized endometrial stroma and hypersecretory endometrium with few fragments showing hyperplastic cyto and syncytiotrophoblastic cells exhibiting mild to moderate atypia. No evidence of fetal tissues or chorionic villi. Molar pregnancy is a great possibility. However, persistent trophoblastic disease cannot be completely excluded in absence of villi. Correlation with sonographic findings to exclude the presence of uterine mass lesion and close monitoring of serum level of beta hCG till normalization are essential for the differentiation.

DIAGNOSIS:

Uterine contents D & C biopsy:

- Dysplastic cyto and syncytiotrophoblastic tissue.
- Recommended for close monitoring of serum level of beta hCG and correlation with uterine sonographic findings regarding presence of any uterine mass lesion.

Pathologist

Prof. Dr. Neveen Tahoun, MD, PhD
