### PATHOLOGY REPORT

<b>Clinical Information.</b>	Generalized lymphadenopathy. ? Lymphoma.
<b>Nature of specimen.</b>	Core biopsy from Lt. Cervical lymph node.

#### GROSS:

Core fragments of collective length 1.6 cm.

#### MICROSCOPIC:

Sections show diffuse infiltrate of intermediate-sized rounded cells with non-cleaved nuclei with many very occasional histiocytes imparting starry sky pattern. Anaplasia is moderate. Picture is consistent with non-Hodgkin's lymphoma (possibilities include Burkitt's and lymphoblastic lymphoma). Confirmation and subtyping by marker study (CD20, CD79a, CD3, CD10, TdT and Ki67) is needed.

#### DIAGNOSIS:

##### Cervical lymph node, core biopsy:

- Atypical lymphoid infiltrate, consistent with non-Hodgkin's lymphoma, (possibilities include lymphoblastic lymphoma and Burkitt's lymphoma).
- Recommended for confirmation and subtyping by marker study.
