PATHOLOGY REPORT

Clinical Information.	Focal expansile dominantly cystic lesion involving the D5 vertebral body and posterior elements—highly suggestive of an aneurysmal bone cyst.
Nature of specimen.	Biopsy

GROSS:

Soft tissue and bone fragments collectively measured 4x3.5x1 cm, totally embedded.

MICROSCOPIC:

A benign bone lesion composed of vascular-like dilated spaces surrounding by compressed fibrotic stroma showing focal interstitial hemorrhage with many osteoclastic type giant cells. No evidence of specific granulomas. No evidence of malignancy.

DIAGNOSIS:

D5 vertebral body lesion, biopsy:

- Aneurysmal bone cyst.
- Negative for malignancy.
