PATHOLOGY REPORT

Clinical Information.	Nasal polypoidal mass.
Nature of specimen.	Biopsy

GROSS:

Soft tissue fragments collectively measured 1.5x1x0.7 cm, totally embedded.

MICROSCOPIC:

Focally ulcerated mucosal fragments covered by pseudostratified ciliated columnar epithelium. The underlying stroma is edematous and extensively infiltrated by dense sheets of mature plasma cells. Interspersed small lymphocytes, histiocytes, and scattered eosinophils are present. No cytologic atypia, necrosis, or significant mitotic activity is identified.

DIAGNOSIS:

Nasal polypoidal mass:

- Inflammatory nasal polyp.
- Negative for malignancy.
