PATHOLOGY REPORT

Clinical Information.	Abnormal uterine bleeding.
Nature of specimen.	Panhysterectomy

GROSS:

Panhysterectomy specimen; Uterus measured 7.5 x 5 x 4 cm with a 2.5 cm myometrium and 0.4 cm of endometrial thickening, containing a single fibroid mass measuring 0.7 cm and an intracavitary polyp measuring 2 x 1.3 cm. Cervix is 2.5 cm long. Right ovary measured 2.5 x 2 x 1 cm with multiple cysts, the largest measuring 0.5 cm. Left ovary measured 2.5 x 1.5 x 1 cm with three cysts, the largest measuring 0.5 cm. Right and left fallopian tubes each measured 5 cm in length.

MICROSCOPIC:

Intracavitary polyp and endometrium is non-secretory and hyperplastic, it is formed of mildly branching glands and lined by 1-2 layers of cells. No evidence of complex glandular pattern. Stroma is cellular. Islands of these endometrial glands and stroma are seen entrapped superficial within myometrium. Myometrial tumor is a benign leiomyoma formed of whorly bundles of mature smooth muscles separated by a fibrous stroma. Ovaries show cystic follicles and corpora albicans. Fallopian tubes and cervix are all unremarkable. No evidence of specific granulomas. No evidence of atypia or malignancy.

DIAGNOSIS:

Panhysterectomy:

- Mild simple endometrial hyperplasia.
- Hyperplastic endometrial polyp.
- Superficial adenomyosis.
- ?Leiomyoma.
- Ovaries show cystic follicles and corpora albicans.
- Fallopian tubes and cervix are unremarkable.
- Negative for atypia and malignancy.
