Referred By:	م/ المتوكل		Reported date:	2026-01-21	

PATHOLOGY REPORT

Clinical Information.	Irregular vaginal bleeding.
Nature of specimen.	Uterine contents

GROSS:

Two bloody soft tissue fragments collectively measured 1.3x1x0.6 cm.

MICROSCOPIC:

Fragments of degenerated decidualized endometrial stroma with entrapped few exhausted secretory glands. No evidence of chorionic villi, fetal membranes or other conception products. Such changes are due to prolonged hormonal therapy. No evidence of tumors.

DIAGNOSIS:

Endometrial biopsy

- Degenerated decidual tissue (decidual cast).
- Negative for atypia.
