PATHOLOGY REPORT

Clinical Information.	Rt. solitary thyroid nodule suspected follicular lesion by ultrasound.
Nature of specimen.	Rt. Hemithyroidectomy

GROSS:

Rt. hemithyroidectomy with intact capsule measured 3.5x3x2 cm. Serial sectioning revealed almost replacement by greyish nodule measured 3 cm.

MICROSCOPIC:

Thyroid nodule shows a benign tumor composed of small follicular formations lined by active follicular cells with a small amount of colloid in the majority of follicles. Separating stroma is delicate and vascular. No evidence of vascular invasion or panmural capsular infiltration.

DIAGNOSIS:

Rt. hemithyroidectomy:

- Follicular adenoma.
- Negative for malignancy.
