PATHOLOGY REPORT	
Clinical Information.	Chronic nodular gastritis with prepyloric small ulcer.
Nature of specimen.	Endoscopic biopsies.

GROSS:

Soft tissue fragments collectively measured 0.6 cm, totally embedded.

MICROSCOPIC:

Gastric mucosa showing focal superficial erosions with mild atrophy of glands and moderate infiltration by lymphocytes and plasma cells. There is evidence of inflammatory activity manifested by many neutrophils infiltrating glands. H. pylori characteristic forms are seen. Focal intestinal metaplasia is noted, however there is no evidence of atypia or malignancy.

DIAGNOSIS:

Stomach, Endoscopic biopsy:

- H. pylori associated chronic atrophic erosive gastritis with associated moderate inflammatory activity and focal intestinal metaplasia.
- Negative for dysplasia or malignancy.
