PATHOLOGY REPORT

Clinical Information.	Well defined lesion at the suprapatellar recess with mild vascularity.
Nature of specimen.	Excision biopsy

GROSS:

Soft tissue mass meseasured 6x4.5x3 cm, having a hemorrhagic cut section.

MICROSCOPIC:

A benign non-capsulated soft tissue tumor formed of cavernous vascular spaces lined by mature endothelium and full of blood. These spaces are arranged in lobules and separated by fibrous stroma. No evidence of atypia or malignancy.

DIAGNOSIS:

Suprapatellar Mass, Excision:

- Cavernous hemangioma.
- Negative for malignancy.
