## PATHOLOGY REPORT

Clinical Information.	Vaginal discharge with small spotting bleeding. O/E: hypertrophic cervix.
Nature of specimen.	D & C biopsy.

### GROSS:

Two biopsies were received

1- Endometrial D & C biopsy: bloody soft tissue fragments collectively measured 3x2.5x0.7 cm, totally embedded.

1- Cervical biopsy: soft tissue fragments collectively measured 3x2.8x1.2 cm.

### MICROSCOPIC:

1- Endometrium is hyperplastic and non-secretory. It is formed of moderately branching and focally crowded glands separated by cellular stroma and lined by 2-3 layers of cells. No evidence of atypia.

2- Polypoid lesion composed of hyperplastic endocervical mucous glands. Covering epithelium is intact and showing areas of squamous metaplasia. Stroma is fibrotic and vascular. No evidence of atypia or malignancy.

### DIAGNOSIS:

#### (1) Endometrial D&C biopsy:

- Moderate simple endometrial hyperplasia without atypia.

#### (2) Cervical biopsy:

- Hyperplastic endocervical polyp with squamous metaplasia. Negative for malignancy.
