Pt. Age:	70 years.	Gender:	Male	Received date:	2026-01-19
Referred By:	م / الحياة		Reported date:	2026-01-22	

PATHOLOGY REPORT

Clinical Information.	Thyroid gland, FNAC
Nature of specimen.	Cytology

GROSS:

Four smears were submitted and stained.

MICROSCOPIC:

Smears are hemorrhagic and hypocellular show abundant thin colloid and scattered hemosiderin-laden macrophages, lymphocytes. No evidence of follicular cells. No evidence of atypical or malignant cells.

DIAGNOSIS:

Thyroid , guided FNAC:

- Benign cytology.
- Negative for malignant cells.
- Consistent with colloid nodule (Bethesda class II).

Comment:

According to Bethesda System for Reporting Thyroid Cytology (BSRTC), for colloid nodule (benign cytology, Bethesda category II), the risk of malignancy is 0-3%, follow up both (Clinically and radiologically) is recommended.
