Received date:		Reported date:	2026-01-22
Referred By:	د/ فهد سهيل		

PATHOLOGY REPORT

Clinical Information.	Pelvic mass.
Nature of specimen.	Tru-cut biopsy.

GROSS:

Tissue cores 1.5-1.7 cm

MICROSCOPIC:

Cellular tumor composed of fascicles or whorly bundles of proliferating spindle cells with hyperchromatic elongated nuclei. Anaplasia is moderate and mitosis is focally active. Marker study are needed for definitive classification (SMA, SOX10, S-100, H-Caldesmon, CD117, Dog-1 and Ki-67).

DIAGNOSIS:

Pelvic mass, Tru-cut biopsy:

- Cellular spindle cell tumor.
- Recommend for subtyping by marker study.
