Pt. Age:	44 years.	Gender:	Male	Received date:	2026-01-19
Referred By:	o.p		Reported date:	2026-01-22	

PATHOLOGY REPORT

Clinical Information.	Pyloric ulcer
Nature of specimen.	Endoscopic biopsy.

GROSS:

Soft tissue fragments collectively measured 0.6x0.5 cm, totally embedded

MICROSCOPIC:

Gastric mucosa showing marked infiltration by lymphocytes and plasma cells. Neutrophils are seen infiltrating glands thus indicating activity. H. pylori characteristic forms are seen colonizing glands. No evidence of intestinal metaplasia, atypia or malignancy. Since cytotoxin-producing H. pylori are capable of inducing complications, their serological detection is recommended.

DIAGNOSIS:

Stomach, endoscopic biopsy:

- H. pylori-associated marked chronic gastritis with marked inflammatory activity.
- Negative for intestinal metaplasia.
- Negative for dysplasia.
- Negative for malignancy.
