PATHOLOGY REPORT	
Clinical Information.	Dysfunctional uterine bleeding.
Nature of specimen.	Total abdominal hysterectomy

GROSS:

Total abdominal hysterectomy specimen; Uterus measured 9x7x5 cm with a 2.5 cm myometrium, showing two fibroid masses largest measuring 0.8 cm. Endometrium measured 0.7 cm in thickness. Cervix measured 3.5 cm long.

MICROSCOPIC:

Endometrium is non-secretory and hyperplastic, it is formed of moderately branching glands and lined by 1-2 layers of cells. No evidence of complex glandular pattern. Stroma is cellular. Islands of these endometrial glands and stroma are seen entrapped superficial within myometrium. Myometrial tumors are benign leiomyomas formed of whorly bundles of mature smooth muscles separated by a fibrous stroma. Cervix show Nabothian cysts with mild endocervicitis.

DIAGNOSIS:

Total abdominal hysterectomy:

- Moderate simple endometrial hyperplasia.
- Superficial adenomyosis.
- Leiomyomas.
- Mild non specific endocervicitis with Nabothian cysts.
- Negative for atypia or malignancy.
