PATHOLOGY REPORT

Clinical Information.	Multiple left cervical and axillary lymphadenopathy, suspected TB.
Nature of specimen.	Lt. cervical LN excision biopsy

GROSS:

Lymph nodes measured 2x1.5x1 cm, totally embedded.

MICROSCOPIC:

Lymph node shows caseating granulomas rich in epithelioid cells & Langhan's giant cells. Picture is consistent with a tuberculous etiology. No evidence of malignancy.

DIAGNOSIS:

Lt. Cervical lymph node, excision biopsy:

- Caseating granulomatous lymphadenitis (tuberculosis).
- Negative for malignancy.
