PATHOLOGY REPORT

Clinical Information.	Irregular uterine bleeding with thick enfometrium and cervical polyp.
Nature of specimen.	D&C with polypectomy

GROSS:

Two biopsies were received:

- 1- Two polypoid soft tissue fragments collectively measured 1.3x1x0.7 cm, totally embedded.
- 2- Soft tissue fragments collectively measured 3.5x3x0.7 cm, totally embedded.

MICROSCOPIC:

- Polypoid lesion composed of hyperplastic endocervical mucous glands and Napolthian cysts, covered by partially ulcerated columnar endocervical epithelium. Stroma is fibrotic and vascular and shows moderate infiltration by inflammatory cells. No evidence of atypia or malignancy.
- Endometrium is hyperplastic and non-secretory. It is formed of moderately branching glands separated by cellular stroma and lined by 1-2 layers of cells. No evidence of complex glandular pattern. No evidence of atypia or malignancy.

DIAGNOSIS:

Cervical polypectomy:

- Inflamed hyperplastic endocervical polyp with Nabothian cysts.
- Negative for atypia.

D & C biopsy:

- Moderate simple endometrial hyperplasia.
- Negative for endometritis.
- Negative for malignancy.
