Referred By:	د/ إبتسام المهدي			Reported date:	2026-07-19

PATHOLOGY REPORT

Clinical Information.	Lt. breast cystic lesion.
Nature of specimen.	Excision

GROSS:

Received into two soft tissue fragments collectively measured 3.3x2.8x1.5 cm, totally embedded.

MICROSCOPIC:

Soft tissue fragments show breast tissue with preserved normal lobular pattern with stromal fibrosis and adenosis. Cytologic features are unremarkable. Cystic dilatation of the ducts with some of them are ectatic with focal mild periductal chronic inflammatory cells. No evidence of malignancy.

DIAGNOSIS:

Lt. Breast cystic lesion, excision:

- Fibrocystic mastopathy and duct ectasia with focal mild chronic periductal mastitis.
- Negative for malignancy.
