Pt. Age:	45years.	Gender:	Male	Received date:	2026-07-23
Referred By:	د / فاطمه			Reported date:	2026-07-27

PATHOLOGY REPORT

Clinical Information.	Perineal lesion, suspected wart.
Nature of specimen.	Biopsy

GROSS:

Soft tissue fragments collectively measured 1x0.7x0.3 cm, totally embedded.

MICROSCOPIC:

Polypoid lesion covered by acanthotic squamous epithelium exhibiting koilocytosis with nuclear enlargement. Core is fibrotic and vascular. This lesion is consistent with low risk HPV infection. No evidence of malignancy.

DIAGNOSIS:

Perineal lesion, biopsy:

- Condyloma acuminatum.
- Negative for malignancy.
