### PATHOLOGY REPORT

Clinical Information.	Menorrhagia due to diffuse adenomyosis. History of bilateral tubal ligation.
Nature of specimen.	Total abdominal hysterectomy with unilateral salpingo-oophorectomy (referred physician stated bilateral salpingo-oophorectomy)

#### GROSS:

Uterus measures 9x7x4.5 cm with myometrial thickness of 2.3 cm showing and endometrial thickness of 0.5 cm. Cervix is 2.5 cm, long. The Rt. ovary and tube were not identified. The Lt. ovary measured 3.5x2x1.5 cm, showing 5 unilocular cysts, the largest being 1.2 cm. The left fallopian tubes measured 5 cm.

#### MICROSCOPIC:

Endometrium is non-secretory, it is formed of slightly branching lined by 1-2 layers of cells. Stroma is cellular. No evidence of complex glandular pattern. Islands of these endometrial glands and stroma are seen entrapped within superficial myometrium. Cervix shows mild chronic ectocervicitis. Lt ovary shows cystic follicles with corpora albicans and hemorrhagic corpus luteum. Lt fallopian tube shows areas of stromal fibrosis. No evidence of specific granulomas. No evidence of atypia or malignancy.

#### DIAGNOSIS:

##### Total abdominal hysterectomy with unilateral salpingo-oophorectomy:

- Moderate simple endometrial hyperplasia.
- Superficial adenomyosis.
- Mild chronic endocervicitis.
- Lt. Ovarian cystic follicles and hemorrhagic corpus luteum.
- Lt. Tubal fibrosis.
- Negative for atypia.
