Referred By:	د / منيره النبهاني			Reported date:	2026-07-29

PATHOLOGY REPORT

Clinical Information.	Chronic thyroiditis. FNA from both lobes.
Nature of specimen.	US guided FNAC

GROSS:

Four unstained smears were submitted and pap stained.

MICROSCOPIC:

Smears are moderately cellular and show numerous mature lymphocytes with scattered plasma cells. Occasional benign thyroid follicular cells are identified. Colloid is scant. No cytologic atypia or malignant cells are seen.

DIAGNOSIS:

Thyroid, fine needle aspiration:

- Consistent with chronic lymphocytic thyroiditis (Bethesda Category II – Benign)
