### PATHOLOGY REPORT

Clinical Information.	Epigastric pain
Nature of specimen.	Endoscopic biopsy.

#### GROSS:

Soft tissue fragments collectively measured 0.6 cm, totally embedded.

#### MICROSCOPIC:

Gastric mucosa showing mild atrophy of glands and moderate infiltration by lymphocytes and plasma cells. There is evidence of inflammatory activity manifested by neutrophils infiltrating glands, however H. pylori characteristic forms are not seen. No evidence of intestinal metaplasia, atypia or malignancy.

A strip of esophageal mucosa is included in the biopsy showing hyperplastic stratified squamous epithelium. No evidence of dysplasia or malignancy in examined material.

#### DIAGNOSIS:

##### Gastroesophageal junction biopsy:

- Mild chronic atrophic gastritis with associated minimal inflammatory activity.
- H. Pylori is not seen.
- Negative for intestinal metaplasia
- Negative for dysplasia.
- Negative for malignancy.
- Superficial esophageal mucosa with hyperplastic stratified squamous epithelium, negative for malignancy.

#### Pathologist

Prof. Dr. Neveen Tahoun, MD, PhD
