Referred By:	د / عبد القادر الفلاحي		Reported date:	2026-01-27	

PATHOLOGY REPORT

Clinical Information.	Obstructive jaundice underwent ERCP with stent.
Nature of specimen.	Cytology

GROSS:

Two smears were prepared from submitted 1 ml brown viscous fluid.

MICROSCOPIC:

Smears show a predominantly inflammatory background composed of abundant neutrophils with admixed lymphocytes and macrophages in a background rich in granular necrotic and proteinaceous debris with bile pigment and red blood cells. Occasional degenerating epithelial cells and cell fragments are seen but lack cytologic atypia.

DIAGNOSIS:

ERCP guided aspiration cytology

- **Category II – Negative for malignancy (Benign / Inflammatory lesion)**

COMMENT

Findings consistent with an inflammatory process with hemorrhage; no cytomorphologic evidence of malignancy identified.
