PATHOLOGY REPORT

Clinical Information.	Uterine mass with dysfunctional uterine bleeding.
Nature of specimen.	Subtotal hysterectomy with Lt salpingoophorectomy (1/2 the specimen was received)

GROSS:

Half the specimen was received: subtotal hysterectomy showing uterus measured 8x3x5 cm, with myometrial thickness 2.5 cm and endometrium measured 0.4, with endometrial polyp measured 2x1.5 cm. Cervical tissue measured 2.5 cm. Lt ovary measured 3.5x2.5x1.3 cm, showing five unilocular cysts, largest is 1 cm. Fallopian tube measured 5 cm, grossly unremarkable.

MICROSCOPIC:

Endometrium is hyperplastic and non-secretory. It is formed of moderately branching and focally crowded glands separated by cellular stroma and lined by 2-3 layers of cells. Glandular epithelium exhibits focal mild atypia. However, no evidence malignancy. No evidence of complex glandular pattern. Polypoid lesion formed of non-secretory hyperplastic endometrium, it is formed of branching glands exhibiting moderate cystic dilatation with focal crowding. Glands are lined by 1-3 layers of cells. Stroma is compact with scattered thick walled blood vessels. Cervix show Naphthian cysts and mild endocervicitis. Lt ovary shows cystic follicles. Lt tube is unremarkable.

DIAGNOSIS:

Subtotal hysterectomy with Lt salpingoophorectomy:

- Moderate simple endometrial hyperplasia with focal mild atypia.
- Hyperplastic endometrial polyp.
- Cervical Naphthian cysts and mild endocervicitis.
- Lt ovarian cystic follicles.
- Negative for malignancy.
