PATHOLOGY REPORT

Clinical Information.	Recurrent nasolabial mass, previously diagnosed as basal cell carcinoma.
Nature of specimen.	Wide Excision.

GROSS:

Wide local excision of nasolabial mass: received oriented for margins, skin ellipse measured 1.7 x 1.4 x 0.7 cm, showing ulcerated fairly defined mass measuring 1.5 x 1.2 cm, located 0.1 cm, 0.1 cm, 0.2 cm and 0.2 cm from the superior, inferior, medial, and lateral margins respectively.

MICROSCOPIC:

- Procedure: Wide local excision.
- Tumor Type: Basaloid squamous cell carcinoma.
- Tumor Site: Nasolabial fold
- Tumor Size : 1.5x1.2 cm.
- Lymph-vascular invasion: present.
- Perineural invasion: Present.
- Depth of invasion: 0.5 cm.
- Extent of infiltration: tumor is invading skeletal muscle superficially.

Margins:

- Deep margin: 0.02 cm, very close.
- Superior margin: 0.1 cm, close.
- Inferior margin: 0.1 cm, close.
- Medial margin: 0.2 cm, free.
- Lateral margin: 0.2 cm, free
- Pathologic Stage: pT1NxMx.

DIAGNOSIS:

?Wide local excision of nasolabial mass:

- Basaloid squamous cell carcinoma.
- Positive Lymphovascular invasion and perineural permeation.
- Margin: very close deep margin 0.02 cm, close superior and inferior margins 0.1 cm.
- Stage pT1NxMx.
