

Pt. Name:	أنهار توفيق سعد القديمي		Lab Number:	0604-2026	
Pt. Age:	30 years.	Gender:	Female	Received date:	2026-01-29
Referred By:	د/ سميرة التويتي		Reported date:	2026-02-02	

PATHOLOGY REPORT

Clinical Information.	Vulval itching and skin thickening, biopsy from labia majors.
Nature of specimen.	Biopsy

GROSS:

Multiple skin eclipses collectively measured 4x3.5x0.8 cm, the largest measuring 2x1.3x0.8 cm.

MICROSCOPIC:

Exophytic skin lesion showing papillary formations of hyperkeratotic and markedly acanthotic stratified squamous epithelium densely rich in melanin pigment. There are multiple horn pseudocysts. Upper dermis shows focal infiltration by lymphocytes and plasma cells. No evidence of malignancy and excision of lesion looks complete.

DIAGNOSIS:

Vulval Skin lesion, excision:

- Pigmented acanthotic seborrheic keratosis
- Negative for malignancy.
