## PATHOLOGY REPORT

Clinical Information.	Breast mass.
Nature of specimen.	Wide local excision and axillary clearance.

## GROSS:

Wide local excision of breast mass: fibrofatty tissue measured 23x7.5x6.5, partially covered by skin measuring 17x3.5 cm, with attached axillary tail measured 9x5.5x2.5 cm. Serial sectioning revealed fairly defined greyish white firm mass measuring 3.5x2.5x2 cm, located 3 cm, 2 cm, 6 cm, 7 cm and 2.5 cm from superior, inferior, medial, lateral and deep margins, respectively. Dissected axillary lymph nodes are variable sized, largest is 1.5 cm.

## MICROSCOPIC:

**Specimen:** Wide local excision.

**Histopathologic diagnosis:**

Invasive carcinoma of no special type, NST (= Invasive duct carcinoma), grade 3.

**Tumor size:** 3.5 cm (greatest dimension) — pT2

**Tumor features:**

- Necrosis with comedo type.
- Stromal tumor-infiltrating lymphocytes (sTILs): intermediate.
- No associated ductal carcinoma insitu.

**Lymphovascular invasion:** present.

**Perineural permeation :** present.

**Margins:**

- Deep margin: negative; closest distance 2.5 cm.
- Superior margin: negative; closest distance 3 cm.
- Inferior margin: negative; closest distance 2 cm.
- Medial margin: negative; closest distance 6 cm.
- Lateral margin: negative; closest distance 7 cm.

**Regional lymph nodes:**

- Examined: 15
- Positive: 0

**Pathologic stage (AJCC):** pT2 N0 Mx.

## DIAGNOSIS:

### Breast mass, wide excision with axillary clearance :

- Invasive carcinoma of no special type, NST (= Invasive duct carcinoma), grade 3.
- Lymph nodes are negative.
- All margins negative.
- Positive lymphovascular invasion and perineural permeation.
- Stage pT2N0Mx.

**Pathologist**
