## PATHOLOGY REPORT

<b>Clinical Information.</b>	Abdominal pain. colonoscopy: normal colonic mucosa with normal vascular pattern, normal terminal ileum mucosa.
<b>Nature of specimen.</b>	Endoscopic biopsies from terminal ileum and rectum.

### GROSS:

Two biopsies were received :

- 1- Terminal ileum: soft tissue fragments collectively measured 0.6 cm, totally embedded.
- 2- Rectum: soft tissue fragment measured 0.4 cm, totally embedded.

### MICROSCOPIC:

- 1- Ileal mucosa showing villi are intact and are negative for atrophy and ulceration. No evidence of specific granulomas. No evidence of malignancy.
- 2- Intact colonic mucosa with mild reduction in the number of mucigenic cells and mild infiltration by lymphocytes, plasma cells and neutrophils. However, crypt abscesses are not identified. No evidence of atypical or malignant cells.

### DIAGNOSIS:

#### Ileal endoscopic biopsy:

- Unremarkable.
- Negative for villus atrophy.
- Negative for malignancy.

#### Rectal colonoscopic biopsy:

- Mild chronic non specific colitis.
- Negative for inflammatory activity.
- Negative for epithelial dysplasia.
- Negative for malignancy.
