

Pt. Name:	رضوان عبد الجبار شمسان الحنان		Lab Number:	0601-2026	
Pt. Age:	47 years.	Gender:	Male	Received date:	2025-12-28
Referred By:	م / تونس		Reported date:	2026-02-03	

PATHOLOGY REPORT

Clinical Information.	History of warts, exact site was not specified.
Nature of specimen.	Excisional Biopsy.

GROSS:

Soft tissue fragments collectively measured 6x5x1.3 cm, the largest measuring 2.5x2x1.3 cm.

MICROSCOPIC:

A benign flat skin lesion showing hyperkeratosis of papillary formations of hyperplastic stratified squamous epithelium. Some cells show koilocytosis suggestive of viral etiology. No evidence of specific granulomas. No evidence of atypia or malignancy.

DIAGNOSIS:

Skin lesions (exact site was not specified), excision biopsy:

- Verruca vulgaris/condyloma acuminata.
- Negative for malignancy.
