## PATHOLOGY REPORT

Clinical Information.	Pap smear for cytology examination
Nature of specimen.	Pap smear for cytology examination.

### GROSS:

Two smears were submitted and stained with pap.

### MICROSCOPIC:

Smear shows unremarkable squamous cells, satisfactory for evaluation with present endocervical / transformation zone components. There is associated mild inflammatory changes without identified clue cells. Monilial spore and hyphae are identified. No evidence of viral or trichomonal infection. No evidence of atypical or malignant cells.

### DIAGNOSIS:

#### Pap smear, conventional cytology:

- Satisfactory for evaluation.
- Negative for intraepithelial lesion or malignancy (NILM).
- Organisms: Moniliasis.
- Mild neutrophilic infiltrate.
- Clue cells are not identified.
