PATHOLOGY REPORT

Clinical Information.	Vomiting of blood. Endoscopy: panerythema gastropathy with multiple prepyloric erosions.
Nature of specimen.	Endoscopic biopsies.

GROSS:

Soft tissue fragments collectively measured 0.6 cm, totally embedded.

MICROSCOPIC:

Gastric mucosa showing areas of superficial erosions and moderate infiltration by lymphocytes and plasma cells. Neutrophils are seen infiltrating glands thus indicating activity. H. pylori characteristic forms are present. Focal intestinal metaplasia is observed. There is no evidence of atypia or malignancy.

DIAGNOSIS:

Stomach, endoscopic biopsy:

- H. pylori associated chronic active erosive gastritis with moderate inflammatory activity and focal intestinal metaplasia.
- Negative for dysplasia.
- Negative for malignancy.
