PATHOLOGY REPORT

Clinical Information.	Lt. ovarian cyst.
Nature of specimen.	Ovarian cystectomy and aspiration cytology.

GROSS:

Two containers were received:

- 1- Received opened cyst 11x8x3 cm, with smooth outer surface.
- 2- Twenty ml of bloody fluid; one smear was prepared and stained.

MICROSCOPIC:

- 1- Fibrotic cyst wall lined by a single layer of cuboidal non-mucigenic cells. No evidence of epithelial piling up or cytological atypia. No evidence of atypia or malignancy.
- 2- Smears are hemorrhagic and show a paucicellular background composed predominantly of proteinaceous fluid with scattered macrophages with hemosiderin-laden forms, occasional inflammatory cells, and rare benign epithelial cells; no cytologic atypia or malignant cells are identified.

DIAGNOSIS:

Lt ovarian cystectomy and aspiration cytology:

- Simple serous cyst.
- Negative for malignancy.
