<b>Referred By:</b>	د/ رضوان الجماعي		<b>Reported date:</b>	2026-02-05	

### PATHOLOGY REPORT

<b>Clinical Information.</b>	Toe pain with blackish discoloration.
<b>Nature of specimen.</b>	Excision biopsy.

#### GROSS:

Soft tissue fragment measured 1.8x1.5x0.8 cm, totally embedded.? fungal infection.

#### MICROSCOPIC:

Submitted biopsy material is superficial shows detached squamous epithelium and focal involvement by dense infiltration by neutrophils and many cell debris, consistent with suppurative inflammation. Specific organism was not identified. No evidence of specific granulomas. No evidence of atypia or malignancy.

#### DIAGNOSIS:

##### Toe lesion, biopsy:

- Chronic (non-specific) suppurative inflammation.
- Negative for malignancy.
